

**Special Website Extra Credit Opportunity**– Go to the following link:  
[http://education.jlab.org/qa/atom\\_model.html](http://education.jlab.org/qa/atom_model.html)

Follow the instructions and make a small (1–2 ft across) and light (it should be able to hang on the wire in my room) 3–D model of ONE of your two elements. Please make it a Bohr or Refined Bohr Model.

You will earn up to 15 pts of extra credit (it depends on your element and its number of sub–atomic particles). The more difficult elements will receive a bit more credit than the lighter atoms. Remember, it's extra credit so please don't argue with me about points, just do it if you want to do so :).
