

Subtracting Two-Digit Numbers

Here is how to subtract two-digit numbers.

Find $55 - 36$.

Estimate: $60 - 40 = 20$, so the answer should be about 20.

What You Think	What You Show	What You Write
<p>Step 1</p> <p>Subtract the ones. Regroup if you need to. Since you can't subtract 6 from 5, regroup.</p>	 <p>Regroup 1 ten into 10 ones.</p> <p>15 ones - 6 ones = 9 ones.</p>	$\begin{array}{r} 4\ 15 \\ -\ 36 \\ \hline 9 \end{array}$
<p>Step 2</p> <p>Subtract the tens.</p>	 <p>4 tens - 3 tens = 1 ten.</p>	$\begin{array}{r} 4\ 15 \\ -\ 36 \\ \hline 19 \end{array}$

Add to check your answer. $19 + 36 = 55$

It checks.

1. $\begin{array}{r} 86 \\ - 51 \\ \hline \end{array}$

35

2. $\begin{array}{r} 47 \\ - 18 \\ \hline \end{array}$

29

3. $\begin{array}{r} 62 \\ - 35 \\ \hline \end{array}$

27

4. $\begin{array}{r} 41 \\ - 11 \\ \hline \end{array}$

30

5. $28 - 17 = \underline{\quad 11 \quad}$

6. $53 - 38 = \underline{\quad 15 \quad}$

7. **Number Sense** To subtract 91 from 99, do you need to regroup? Explain.

Sample answer: No. $9 > 1$, so no regrouping is needed.

8. Felicia has 67 paperback books in her collection. She sold 48 of them. How many books does she have left?

19 books
