

# Geography Club

Do you like any of the following . . .

Maps?

Learning about other countries?

Learning about other cultures?

Understanding the geography of the world in which we live?

If so, come join our Geography Club  
to prepare for the National Geographic GeoBee.

The *National Geographic GeoBee* is an educational program created by National Geographic for students in 4<sup>th</sup>-8<sup>th</sup> grade. It was created to improve American children's knowledge of geography. The *GeoBee* is conducted in a number of stages, the first being school level *GeoBee*. The school *GeoBee* is conducted similarly to a spelling bee, with questions, sent to us by National Geographic, being asked by a moderator, with students from our school. The winner from our school will take the state qualification test to see if they qualify to move on

to compete in the State *GeoBee* with other students from Pennsylvania. For more specific information on the *GeoBee*, please visit: <http://www.nationalgeographic.com/geobee>

The Geography Club will gather weekly so that students can learn about geography together. Activities might include: making maps, discussing current events related to geography, learning about land and water features, playing map and geography games, learning and sharing about other cultures, utilizing geography websites and geography web games to learn about our world.

---
